

Ethical Analysis of Engineering Artifact

Due December 9, 2005

Along with the final report, each team must include a 1-page analysis of the impact of their robotic software from an ethical and professional responsibility point-of-view. This analysis should be included as an extra section in the final report and adhere to all specification of that report.

The analysis should address future uses of the technology and the ethical responsibilities of those connected to the robotic software (developers, users, and and others affected). The ACM Code of Ethics and Professional Conduct (<http://www.acm.org/constitution/code.html>) is one recommended place to start. The first section (General Moral Imperatives) is the most important aspect.
