Physics of Natural Phenomena

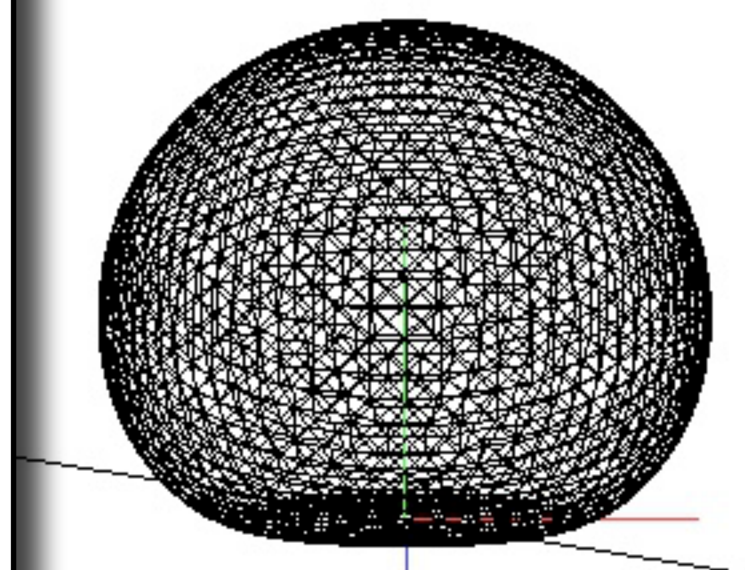
- **Newton's Second Law (*F* = *ma*)**

  *The acceleration **a** of a body is parallel and directly proportional to the net force **F** acting on the body, is in the direction of the net force, and is inversely proportional to the mass **m** of the body.*

- **Newton's Third Law (Action/ Reaction)**

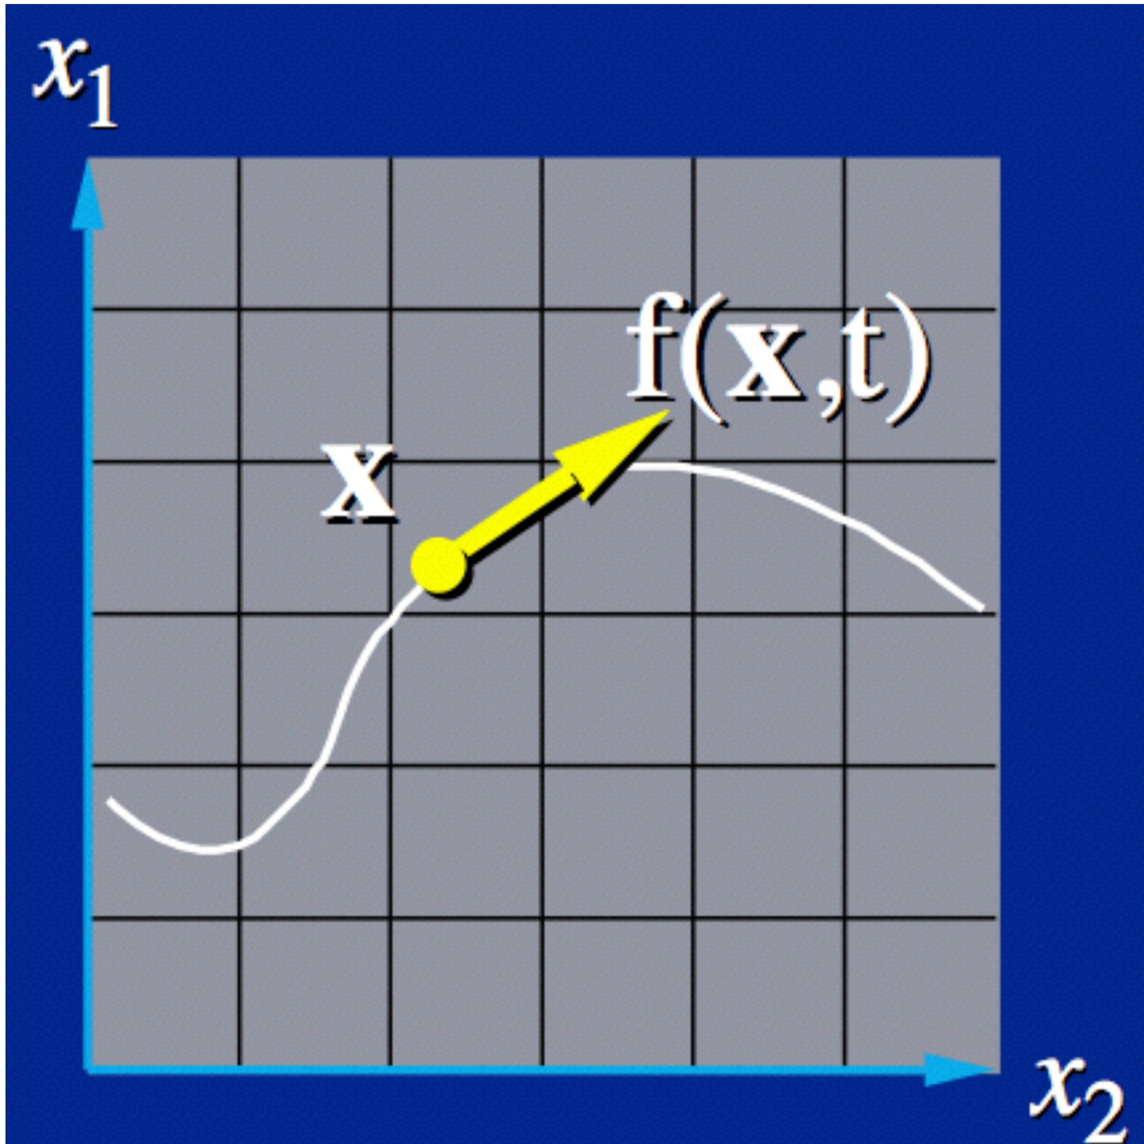
  When a body exerts a force F_1 on a second body, the second body simultaneously exerts a force $F_2=-F_1$ on the first body. This means that F_1 and F_2 are equal in magnitude and opposite in direction.

[Wikipedia]



Math of Natural Phenomena

Ordinary Differential Equations



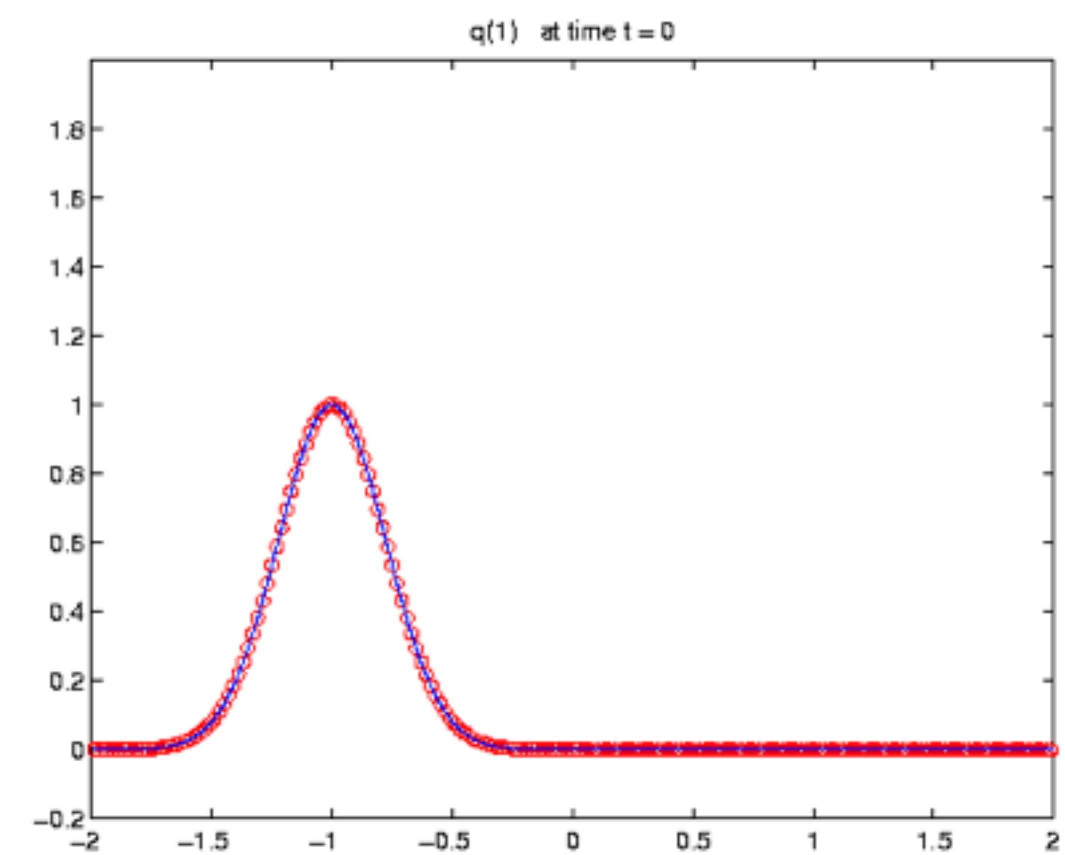
$$\dot{\mathbf{x}} = \mathbf{f}(\mathbf{x}, t)$$

- **x(*t*): a moving point.**
- **f(x,*t*): x's velocity.**

Math of Natural Phenomena

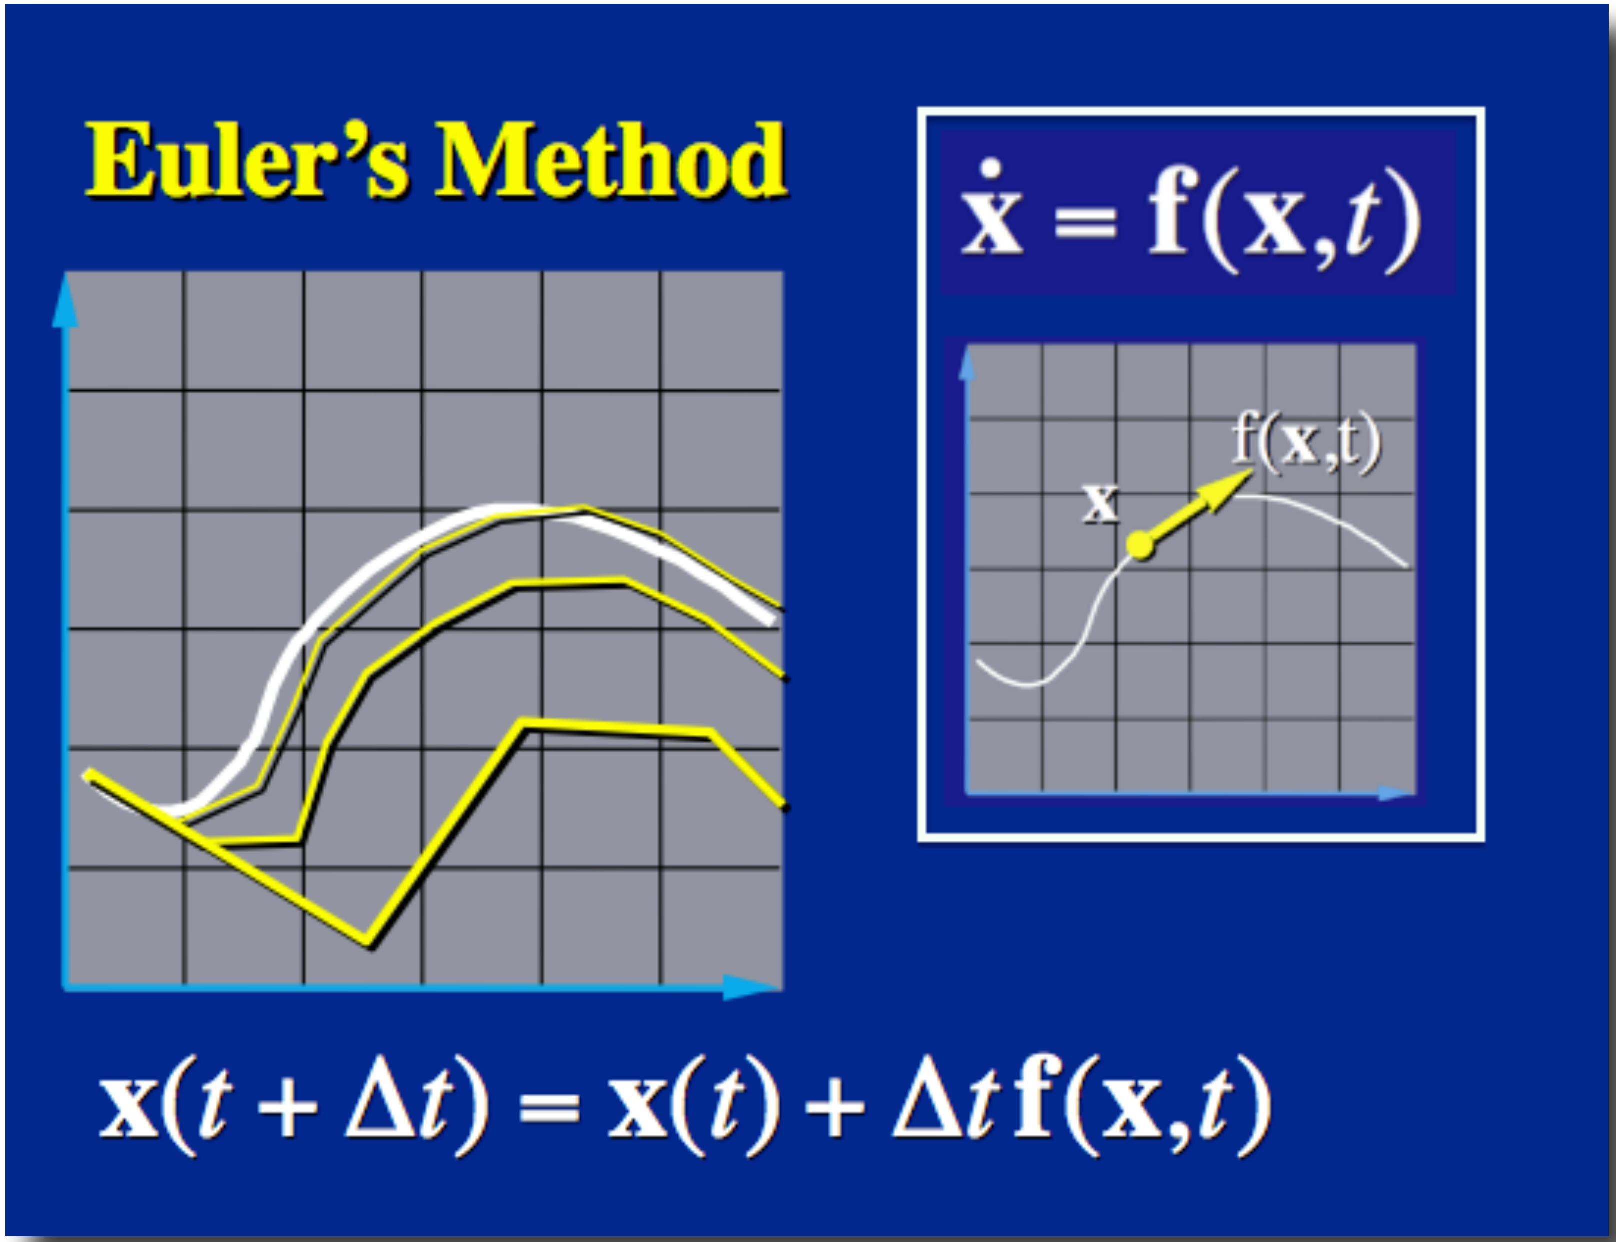
Partial Differential Equations

$$c_t + \vec{v} \cdot \nabla c = f(t)$$

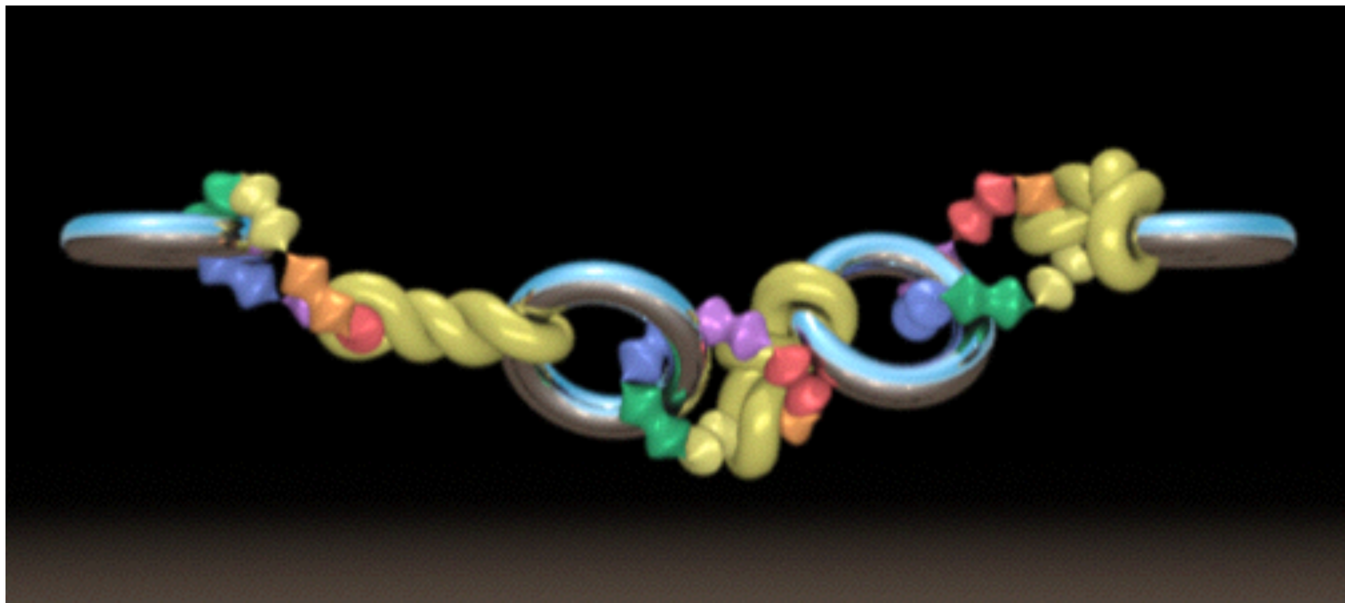


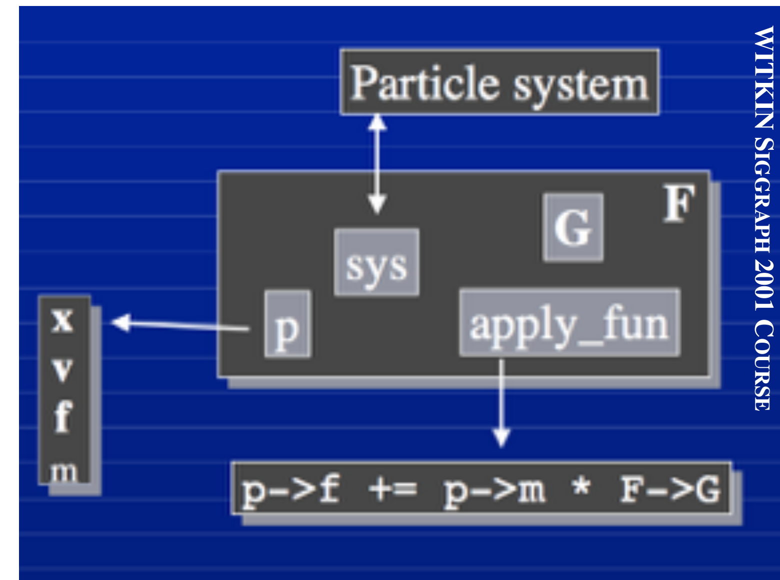
CLAWPACK

Numerical Solution of Diff. Eq.



Data Structures and Algorithms





I. Advance velocity $\mathbf{v}^n \longrightarrow \tilde{\mathbf{v}}^{n+\frac{1}{2}}$

II. Apply collisions $\mathbf{v}^n \longrightarrow \hat{\mathbf{v}}^n$, $\tilde{\mathbf{v}}^{n+\frac{1}{2}} \longrightarrow \hat{\mathbf{v}}^{n+\frac{1}{2}}$

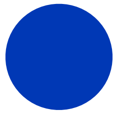
III. Apply contact and constraint forces $\hat{\mathbf{v}}^{n+\frac{1}{2}} \longrightarrow \mathbf{v}^{n+\frac{1}{2}}$

IV. Advance positions $\mathbf{x}^n \longrightarrow \mathbf{x}^{n+1}$ using $\mathbf{v}^{n+\frac{1}{2}}$, $\hat{\mathbf{v}}^n \longrightarrow \bar{\mathbf{v}}^n$

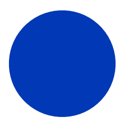
V. Advance velocity $\bar{\mathbf{v}}^n \longrightarrow \mathbf{v}^{n+1}$

Particles

Particle: basic dynamic object

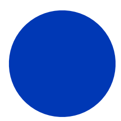


Particle: basic dynamic object



mass m

Particle: basic dynamic object



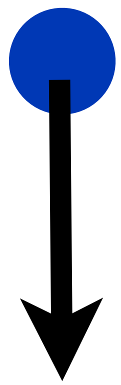
mass

$$m$$

3 dof

$$\vec{X} = (x, y, z)$$

Particle: basic dynamic object



mass m

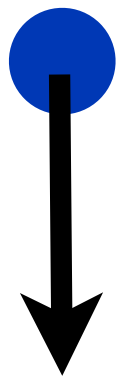
3 dof

$$\vec{X} = (x, y, z)$$

forces: e.g., gravity

$$\vec{F} = -m\vec{g}$$

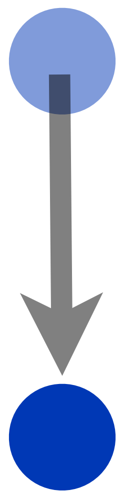
Particle: basic dynamic object



Equations of motion:
Newton's 2nd Law

$$\vec{F} = m\vec{a}$$

Particle: basic dynamic object



Equations of motion:
Newton's 2nd Law

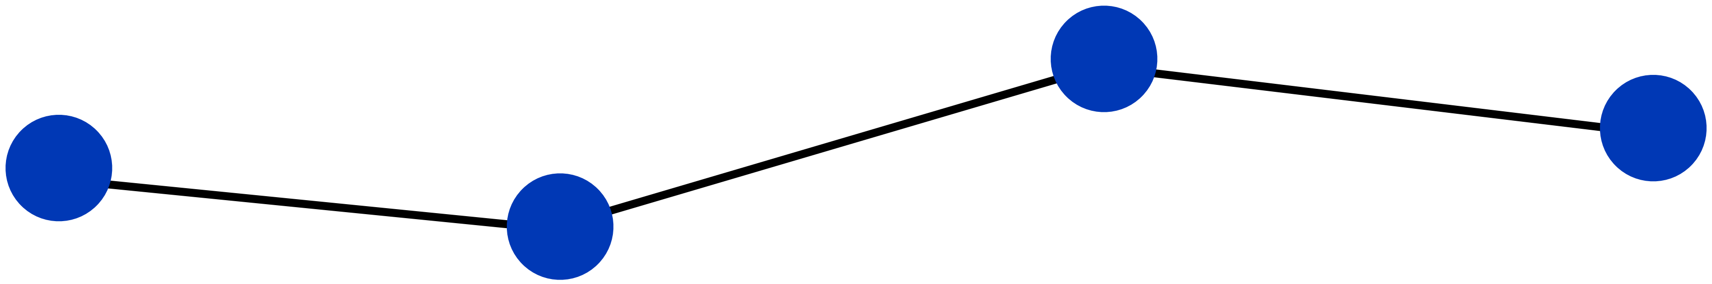
$$\vec{F} = m\vec{a}$$

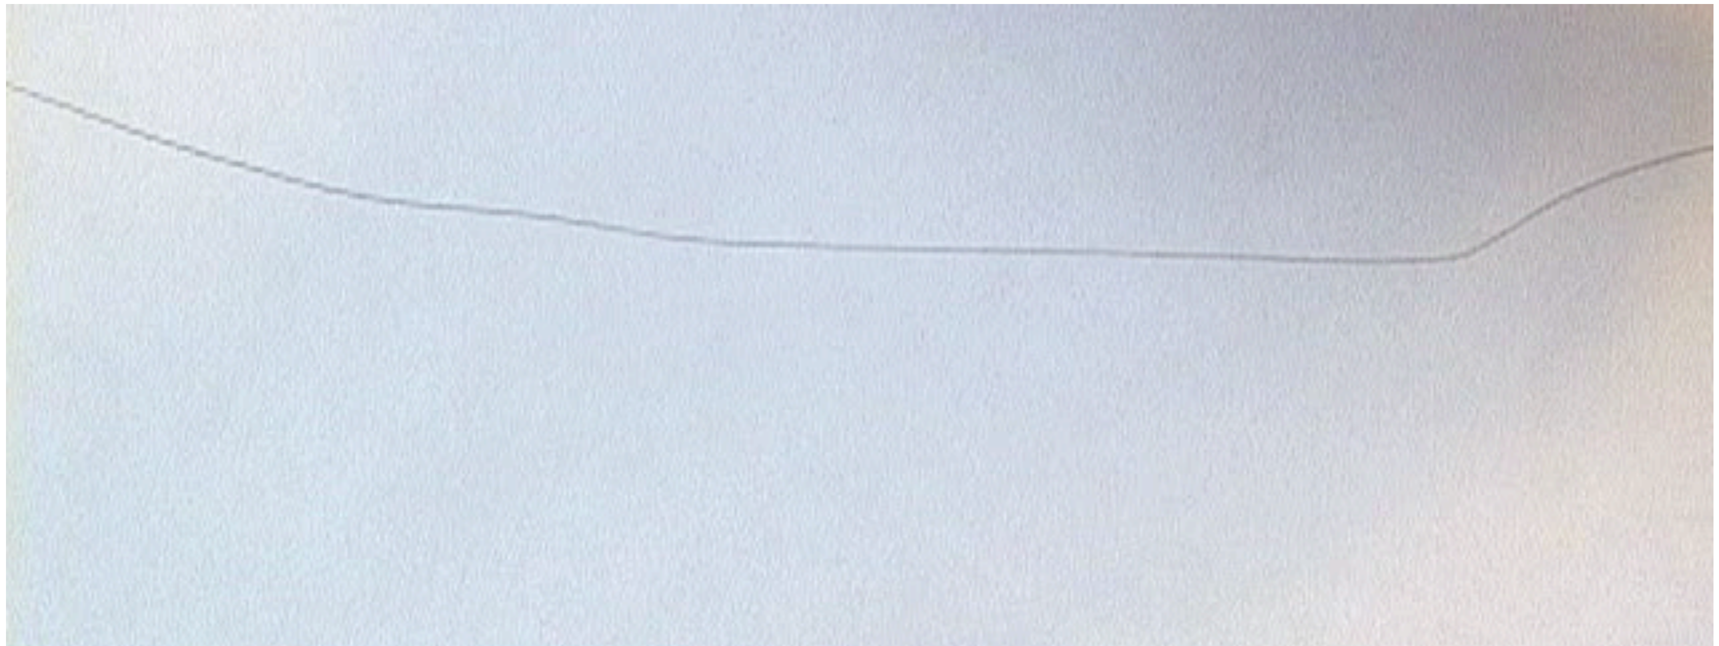
$$\frac{d\vec{x}}{dt} = \vec{v}$$
$$m\frac{d\vec{v}}{dt} = \vec{F}$$

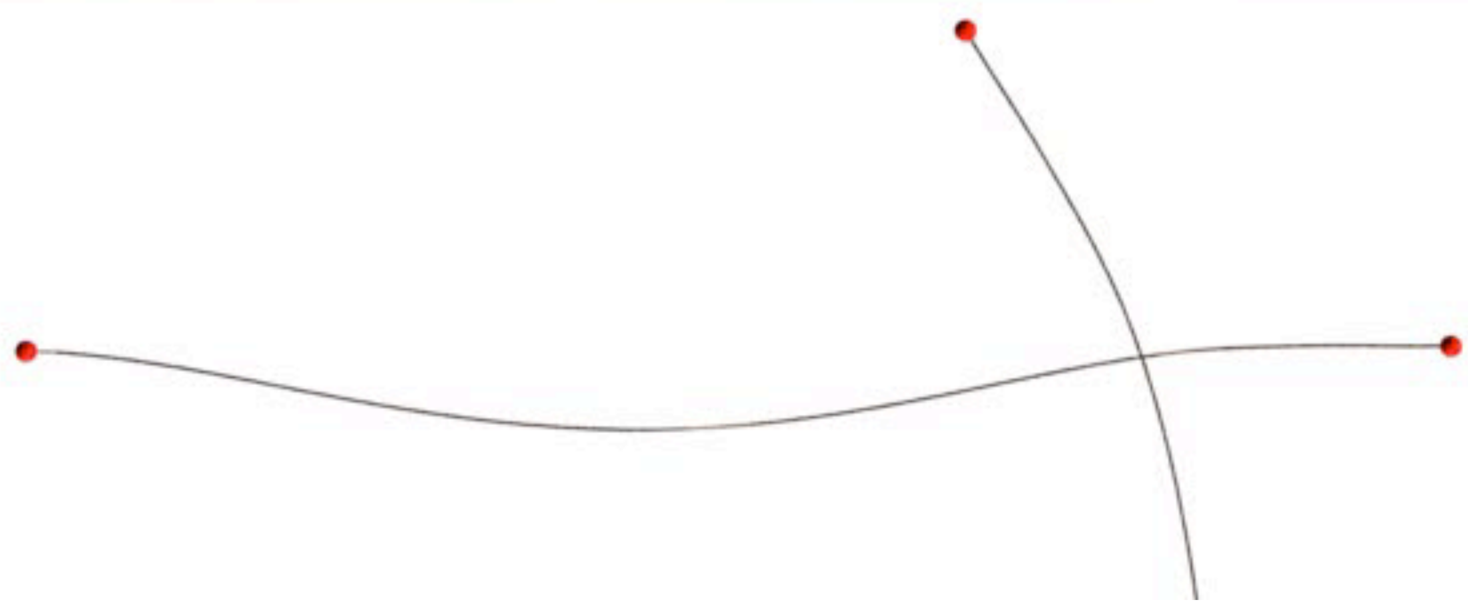
System of ODEs

Deformable bodies

Connect a bunch of particles into a 1D line segment with springs



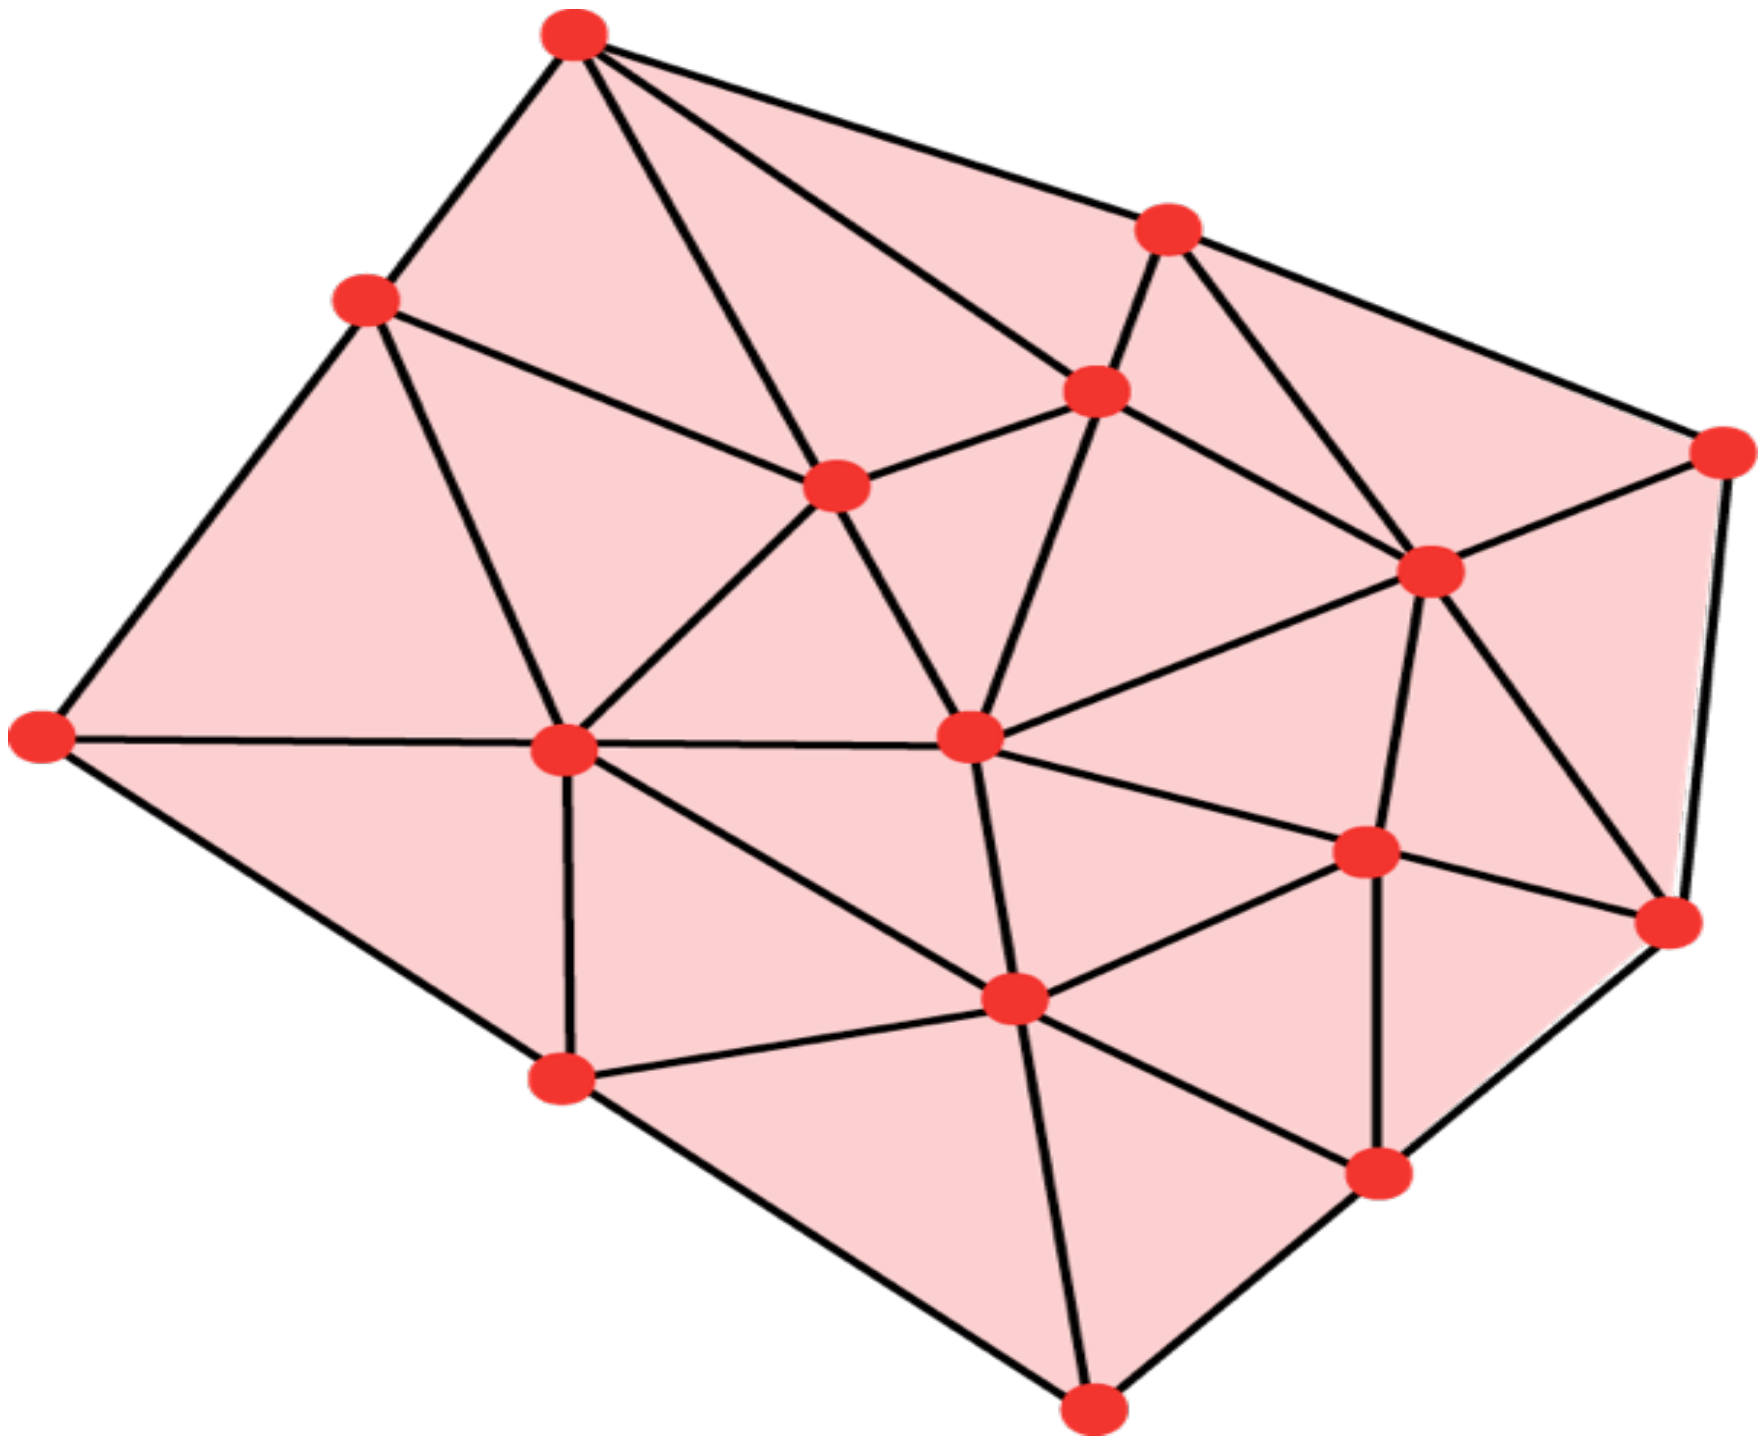




A Mass Spring Model for Hair Simulation

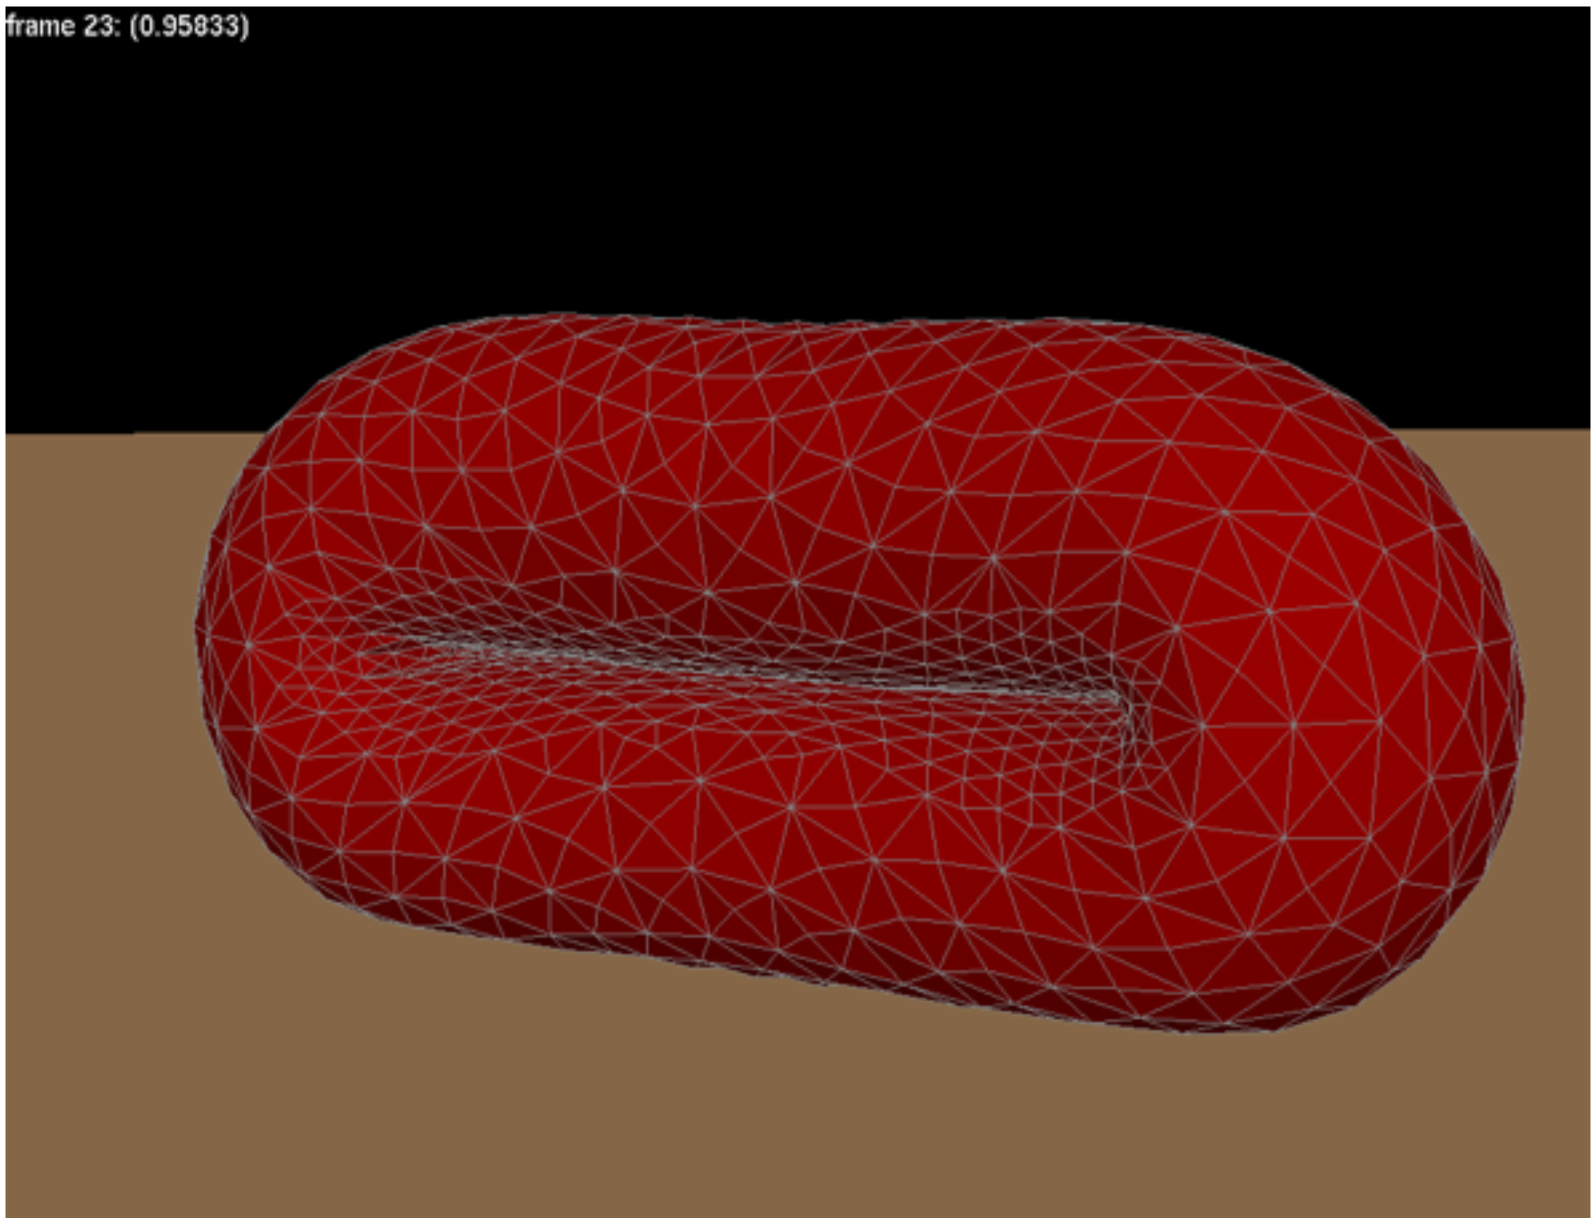
Selle, A., Lentine, M., G., and Fedkiw, R. ACM Transactions on Graphics SIGGRAPH 2008, ACM TOG 27, 64.1-64.11 (2008)

Connect a bunch of particles into a <u>2D mesh</u>

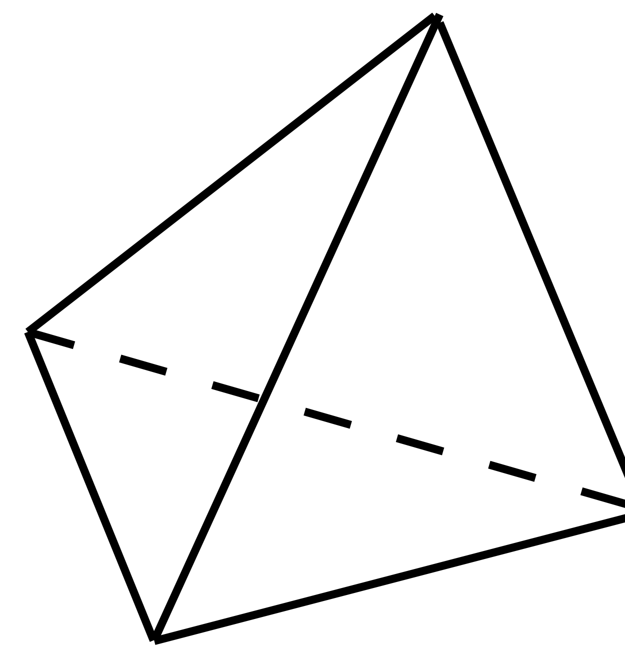


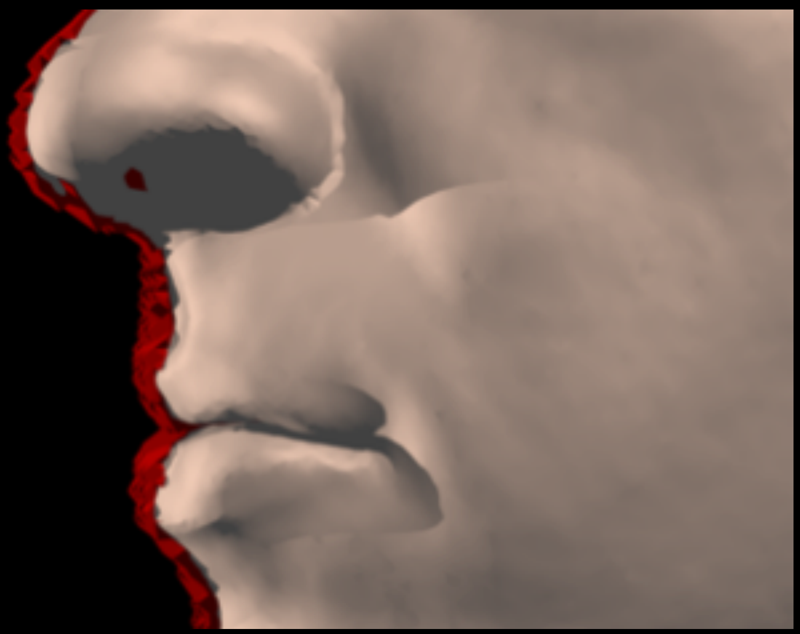
Selle et al. 2007

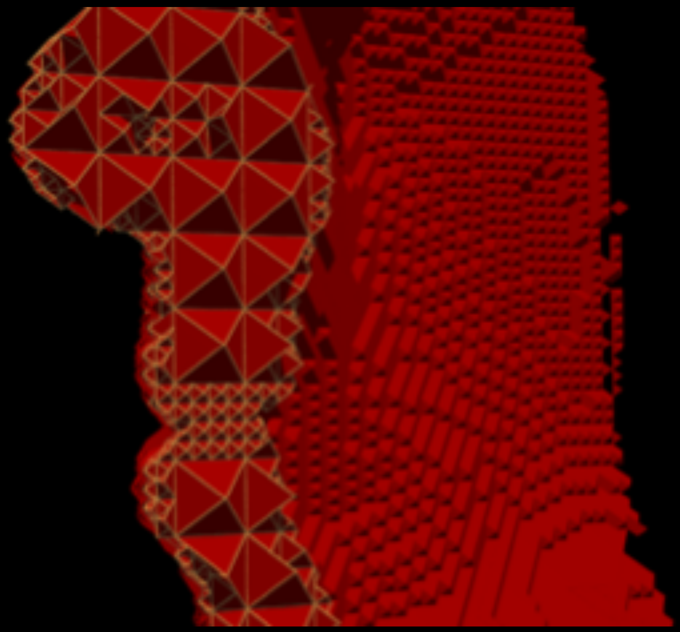
Connect a bunch of particles into a 3D mesh



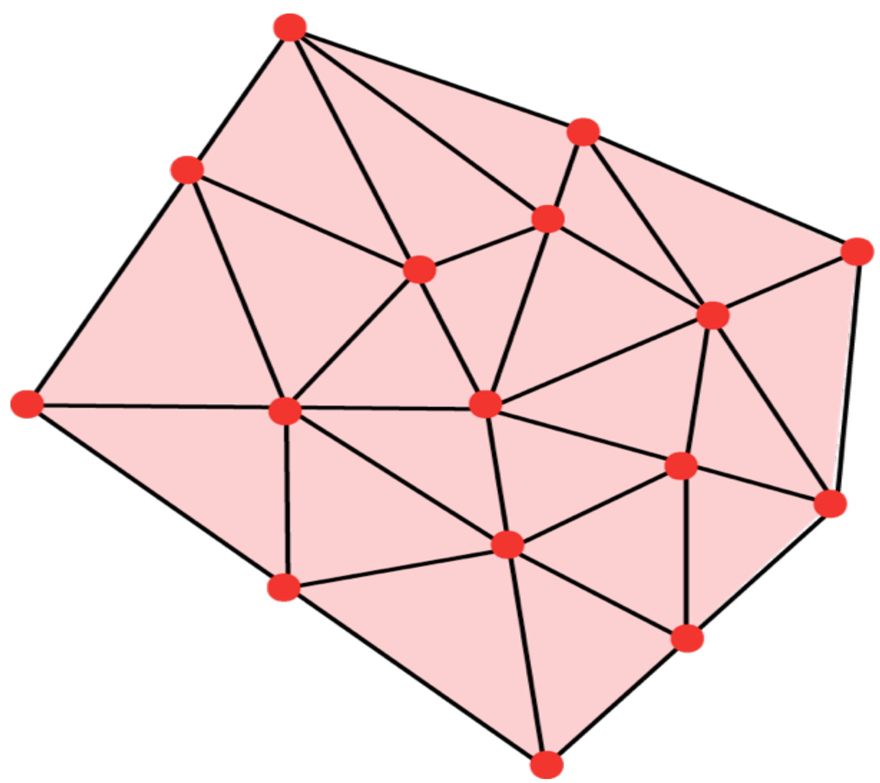
tetrahedron







Deformable bodies: equations of motion



Equations of motion:
Newton's 2nd Law

$$\vec{F} = m\vec{a}$$

$$\frac{d\vec{x}}{dt} = \vec{v}$$
$$m\frac{d\vec{v}}{dt} = \vec{F}$$

System of PDEs

contains spatial derivatives

Rigid bodies

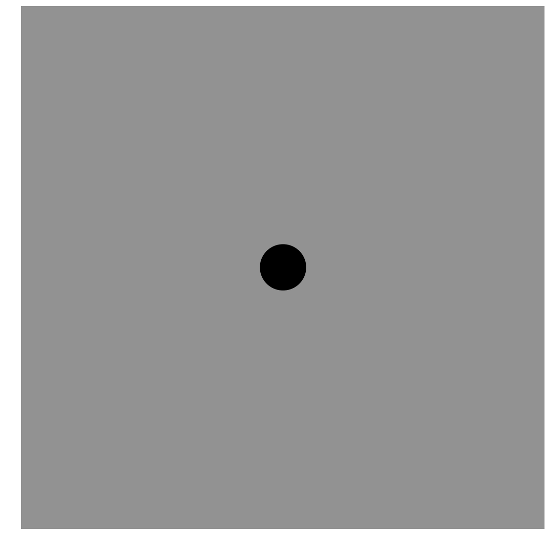
Rigid bodies

6 dofs

forces and torques

elastic collisions

ODEs

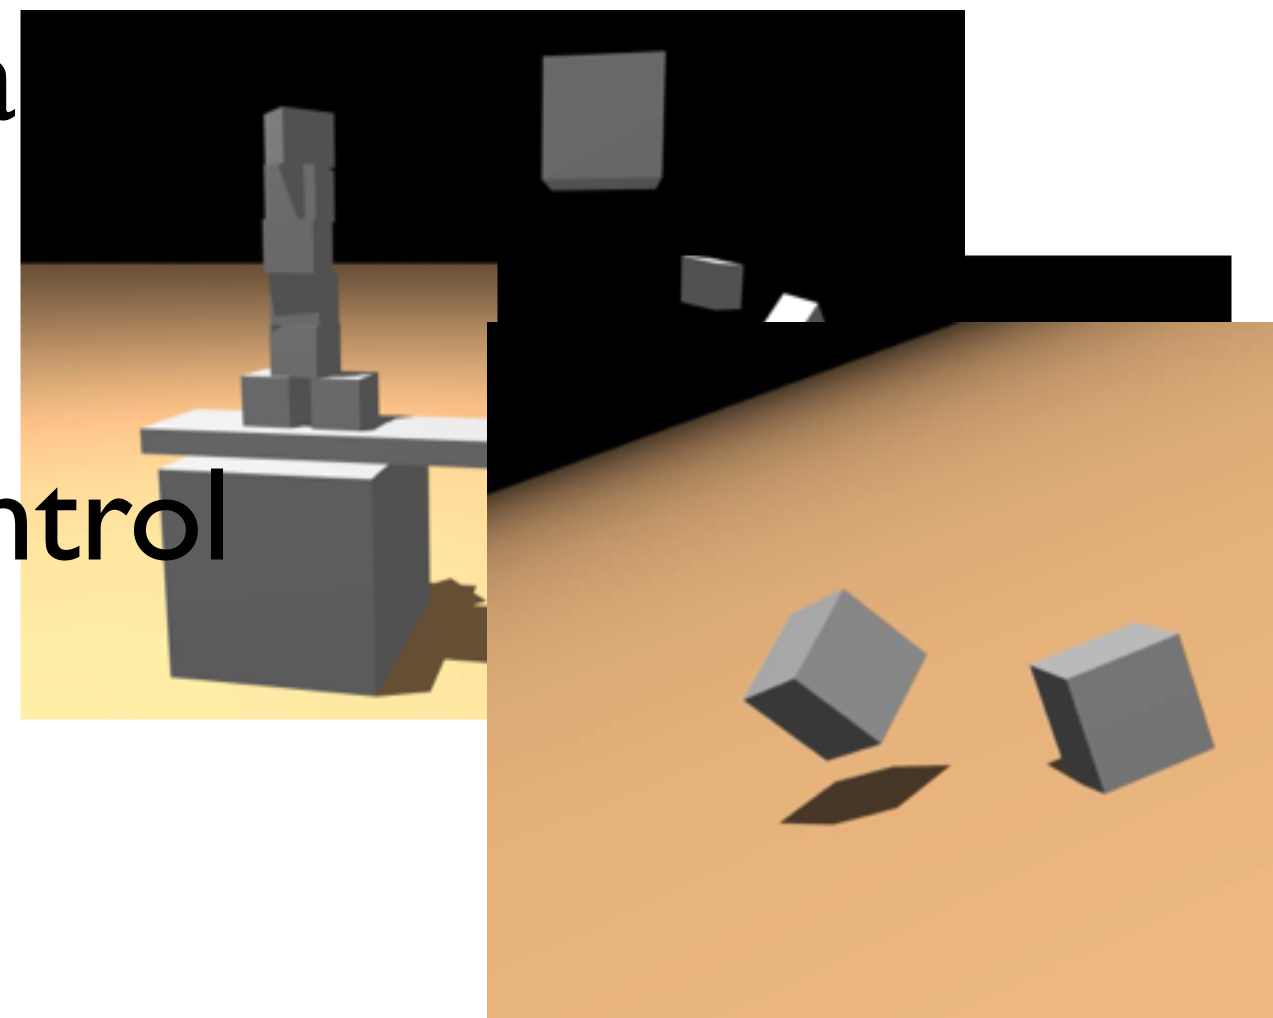


$(\vec{X}, \vec{\Omega})$

$(\vec{F}, \vec{\tau})$

Rigid body phenomena

- stacking
- collisions, conta
- friction
- articulation, control



Articulated rigid bodies

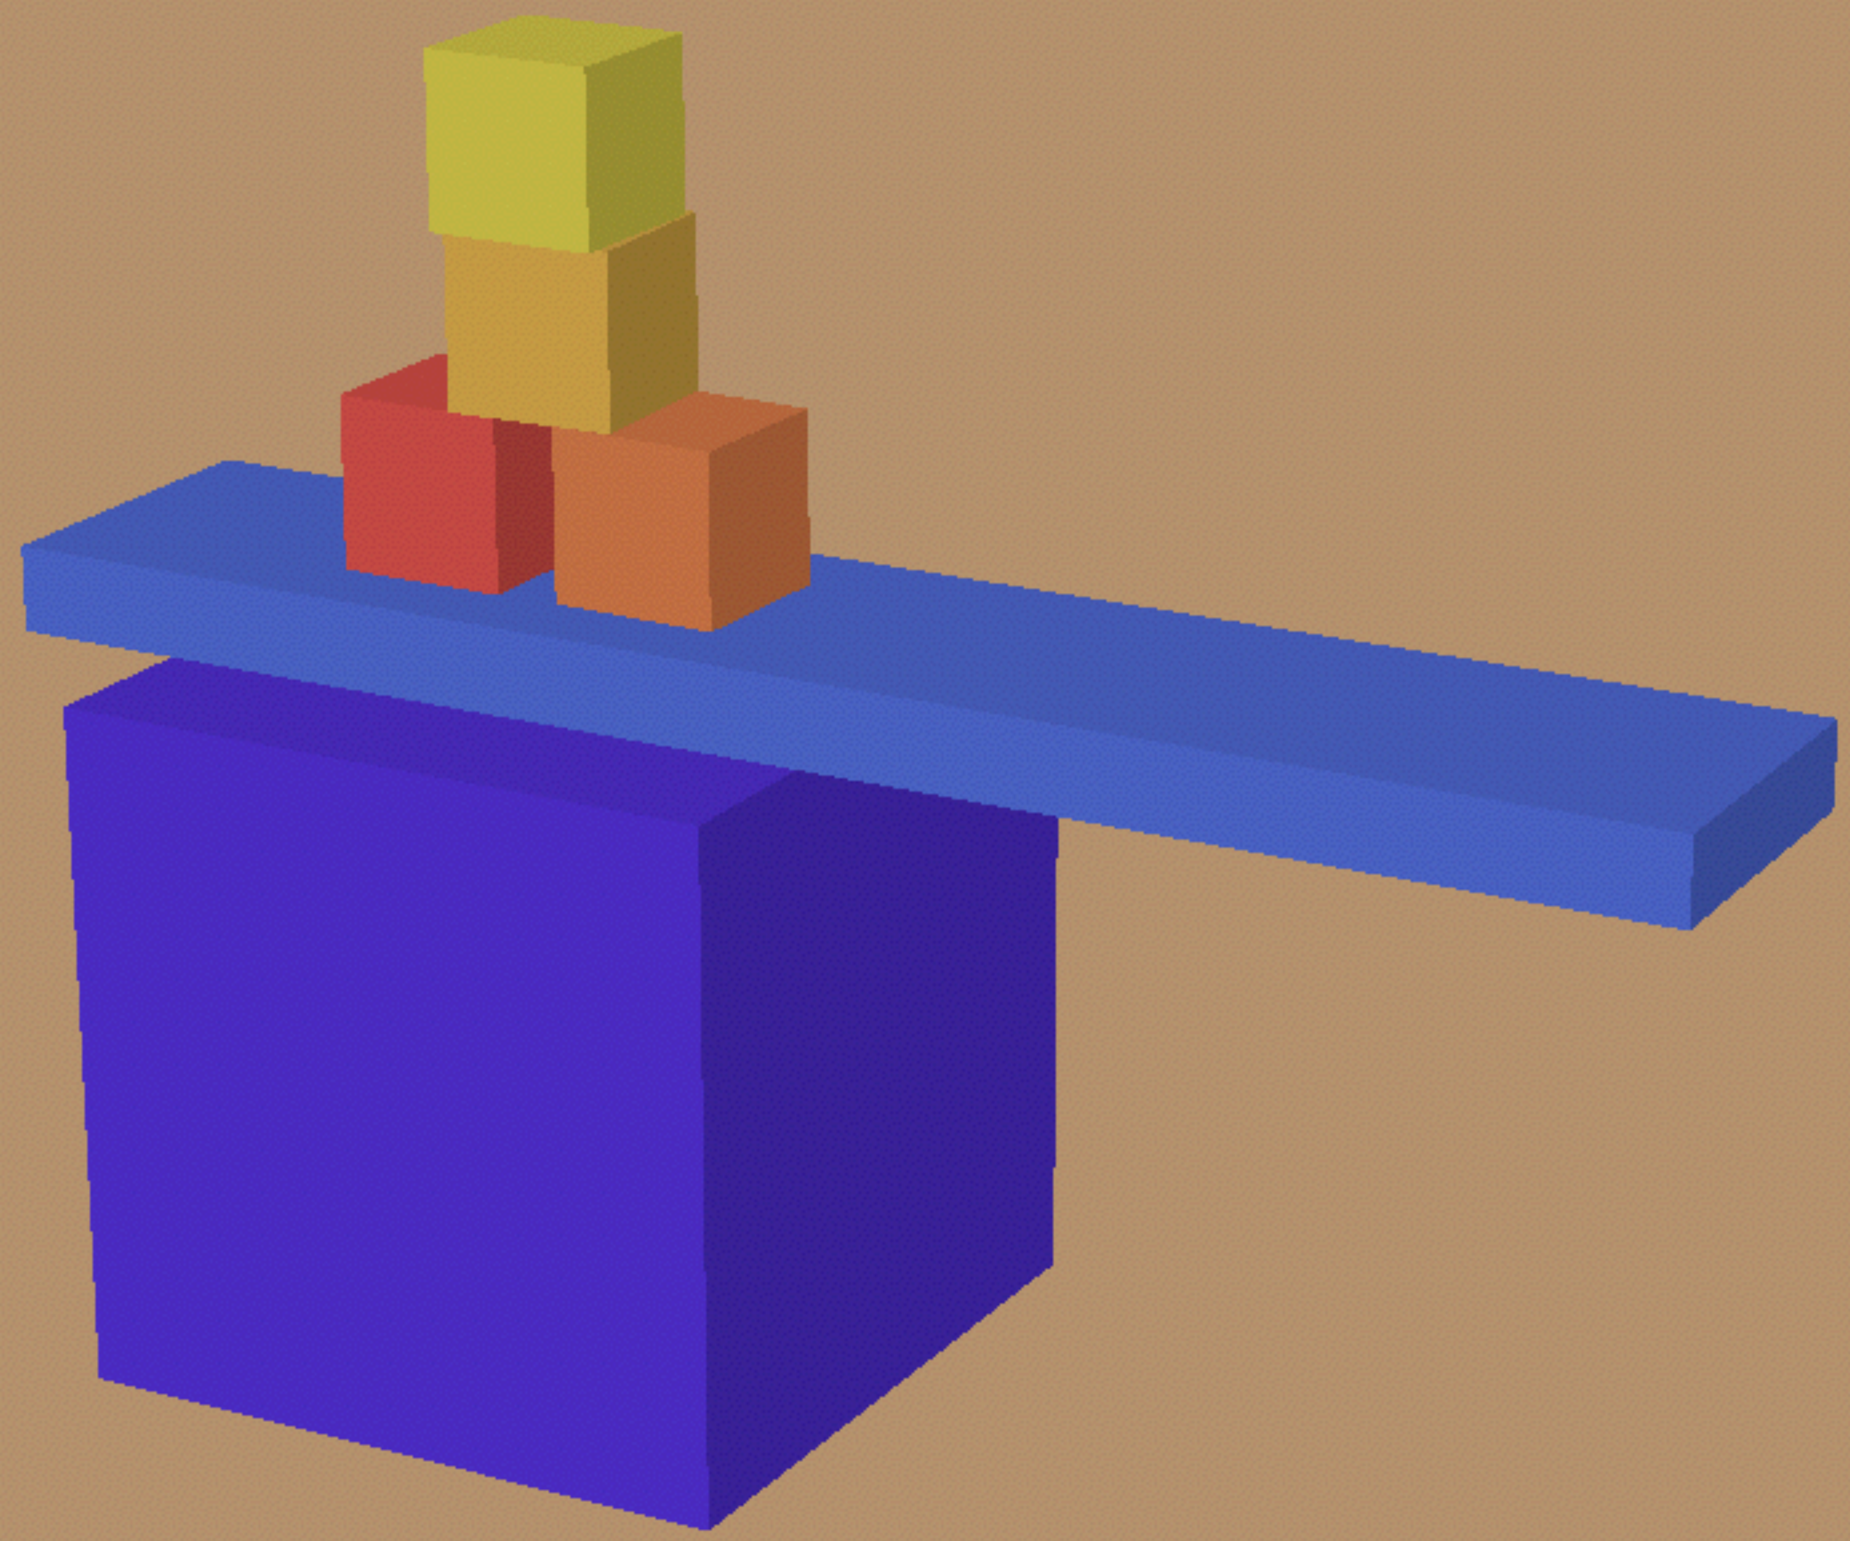
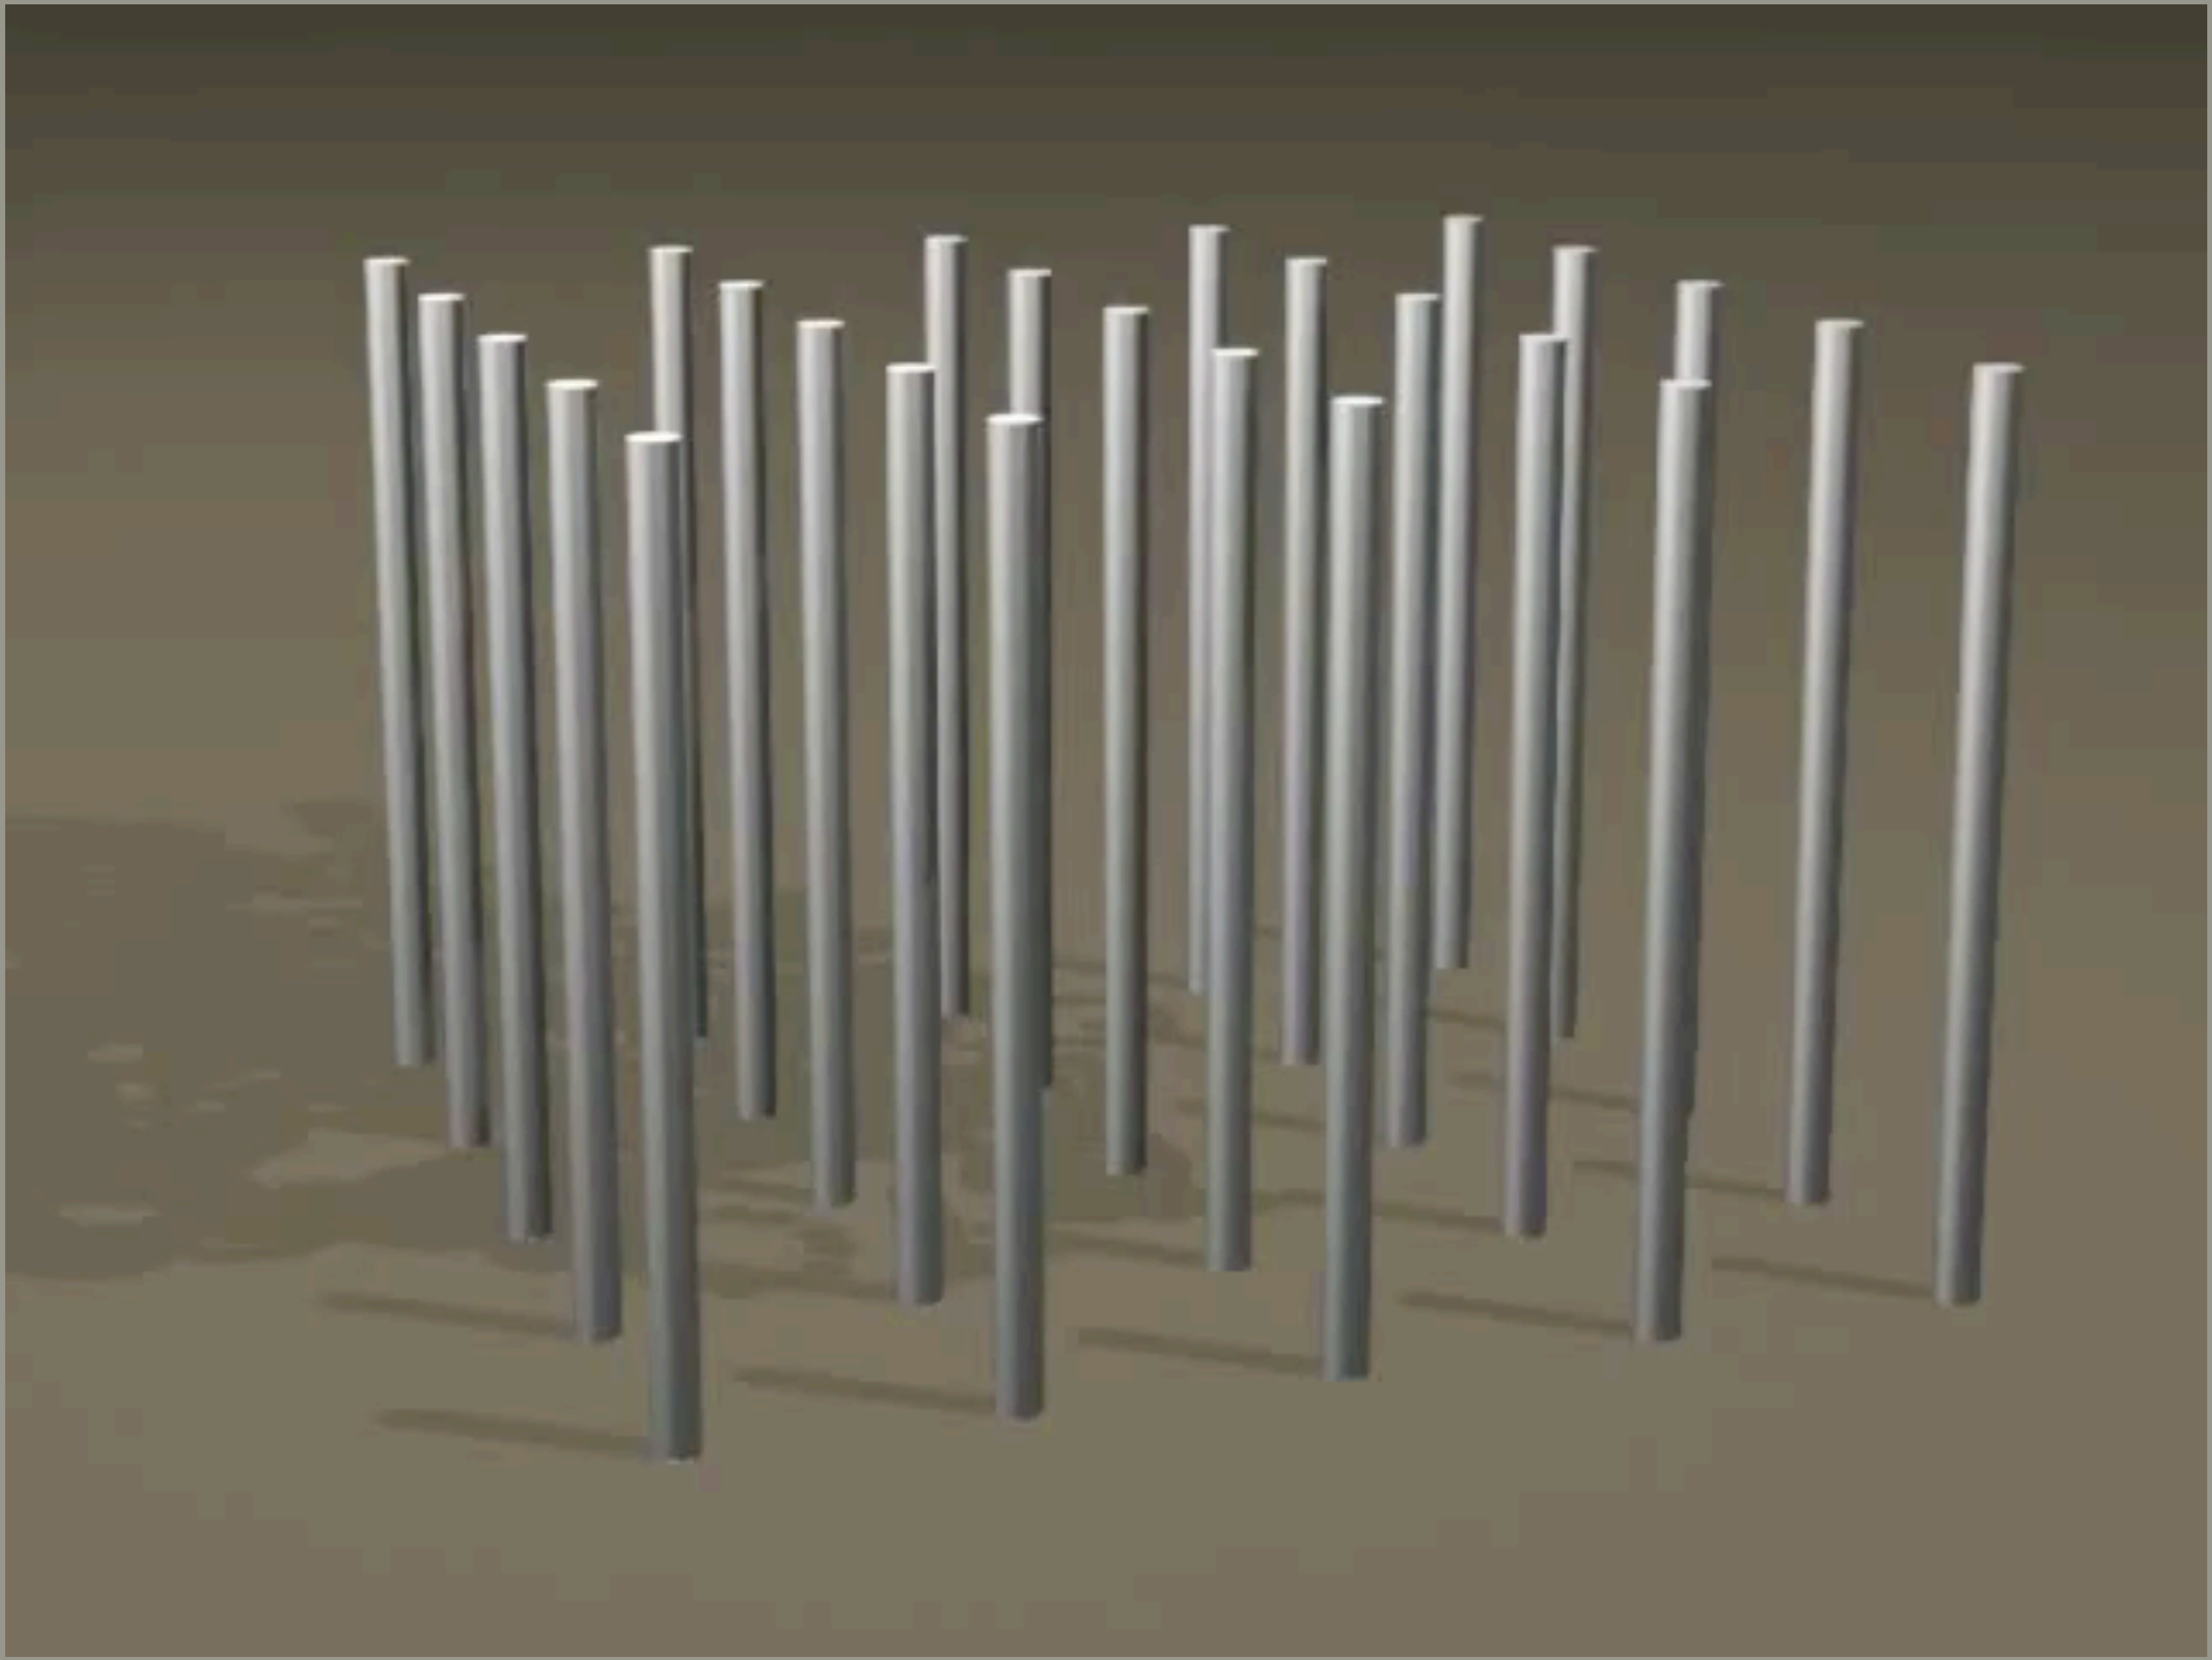
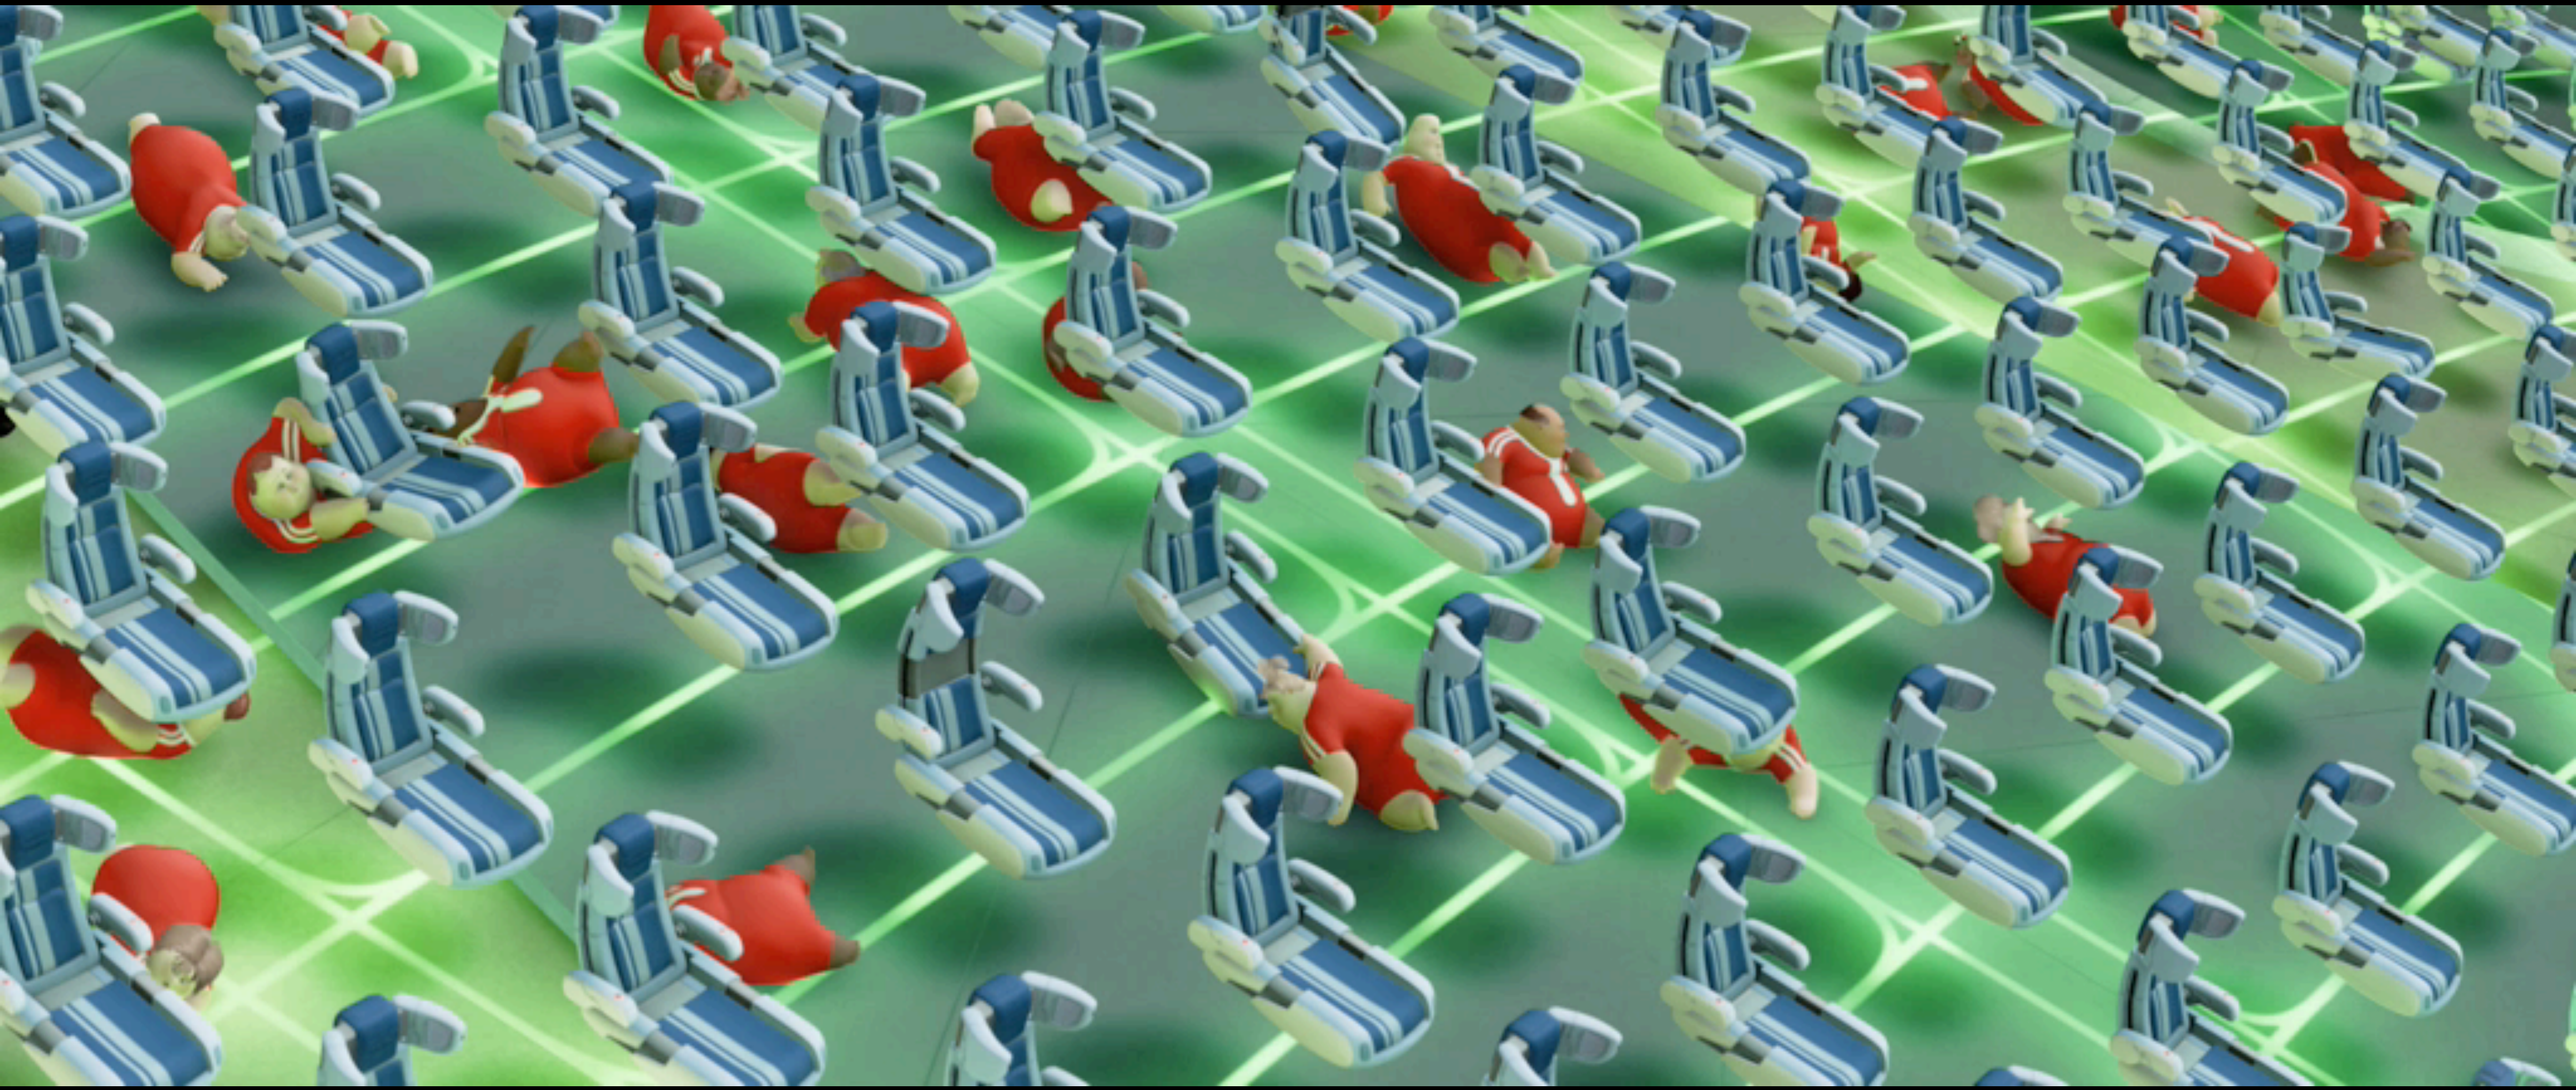
Contact and collision

frame 25: (1.04167)



Simultaneous resolution of contact, elastic deformation, articulation constraints



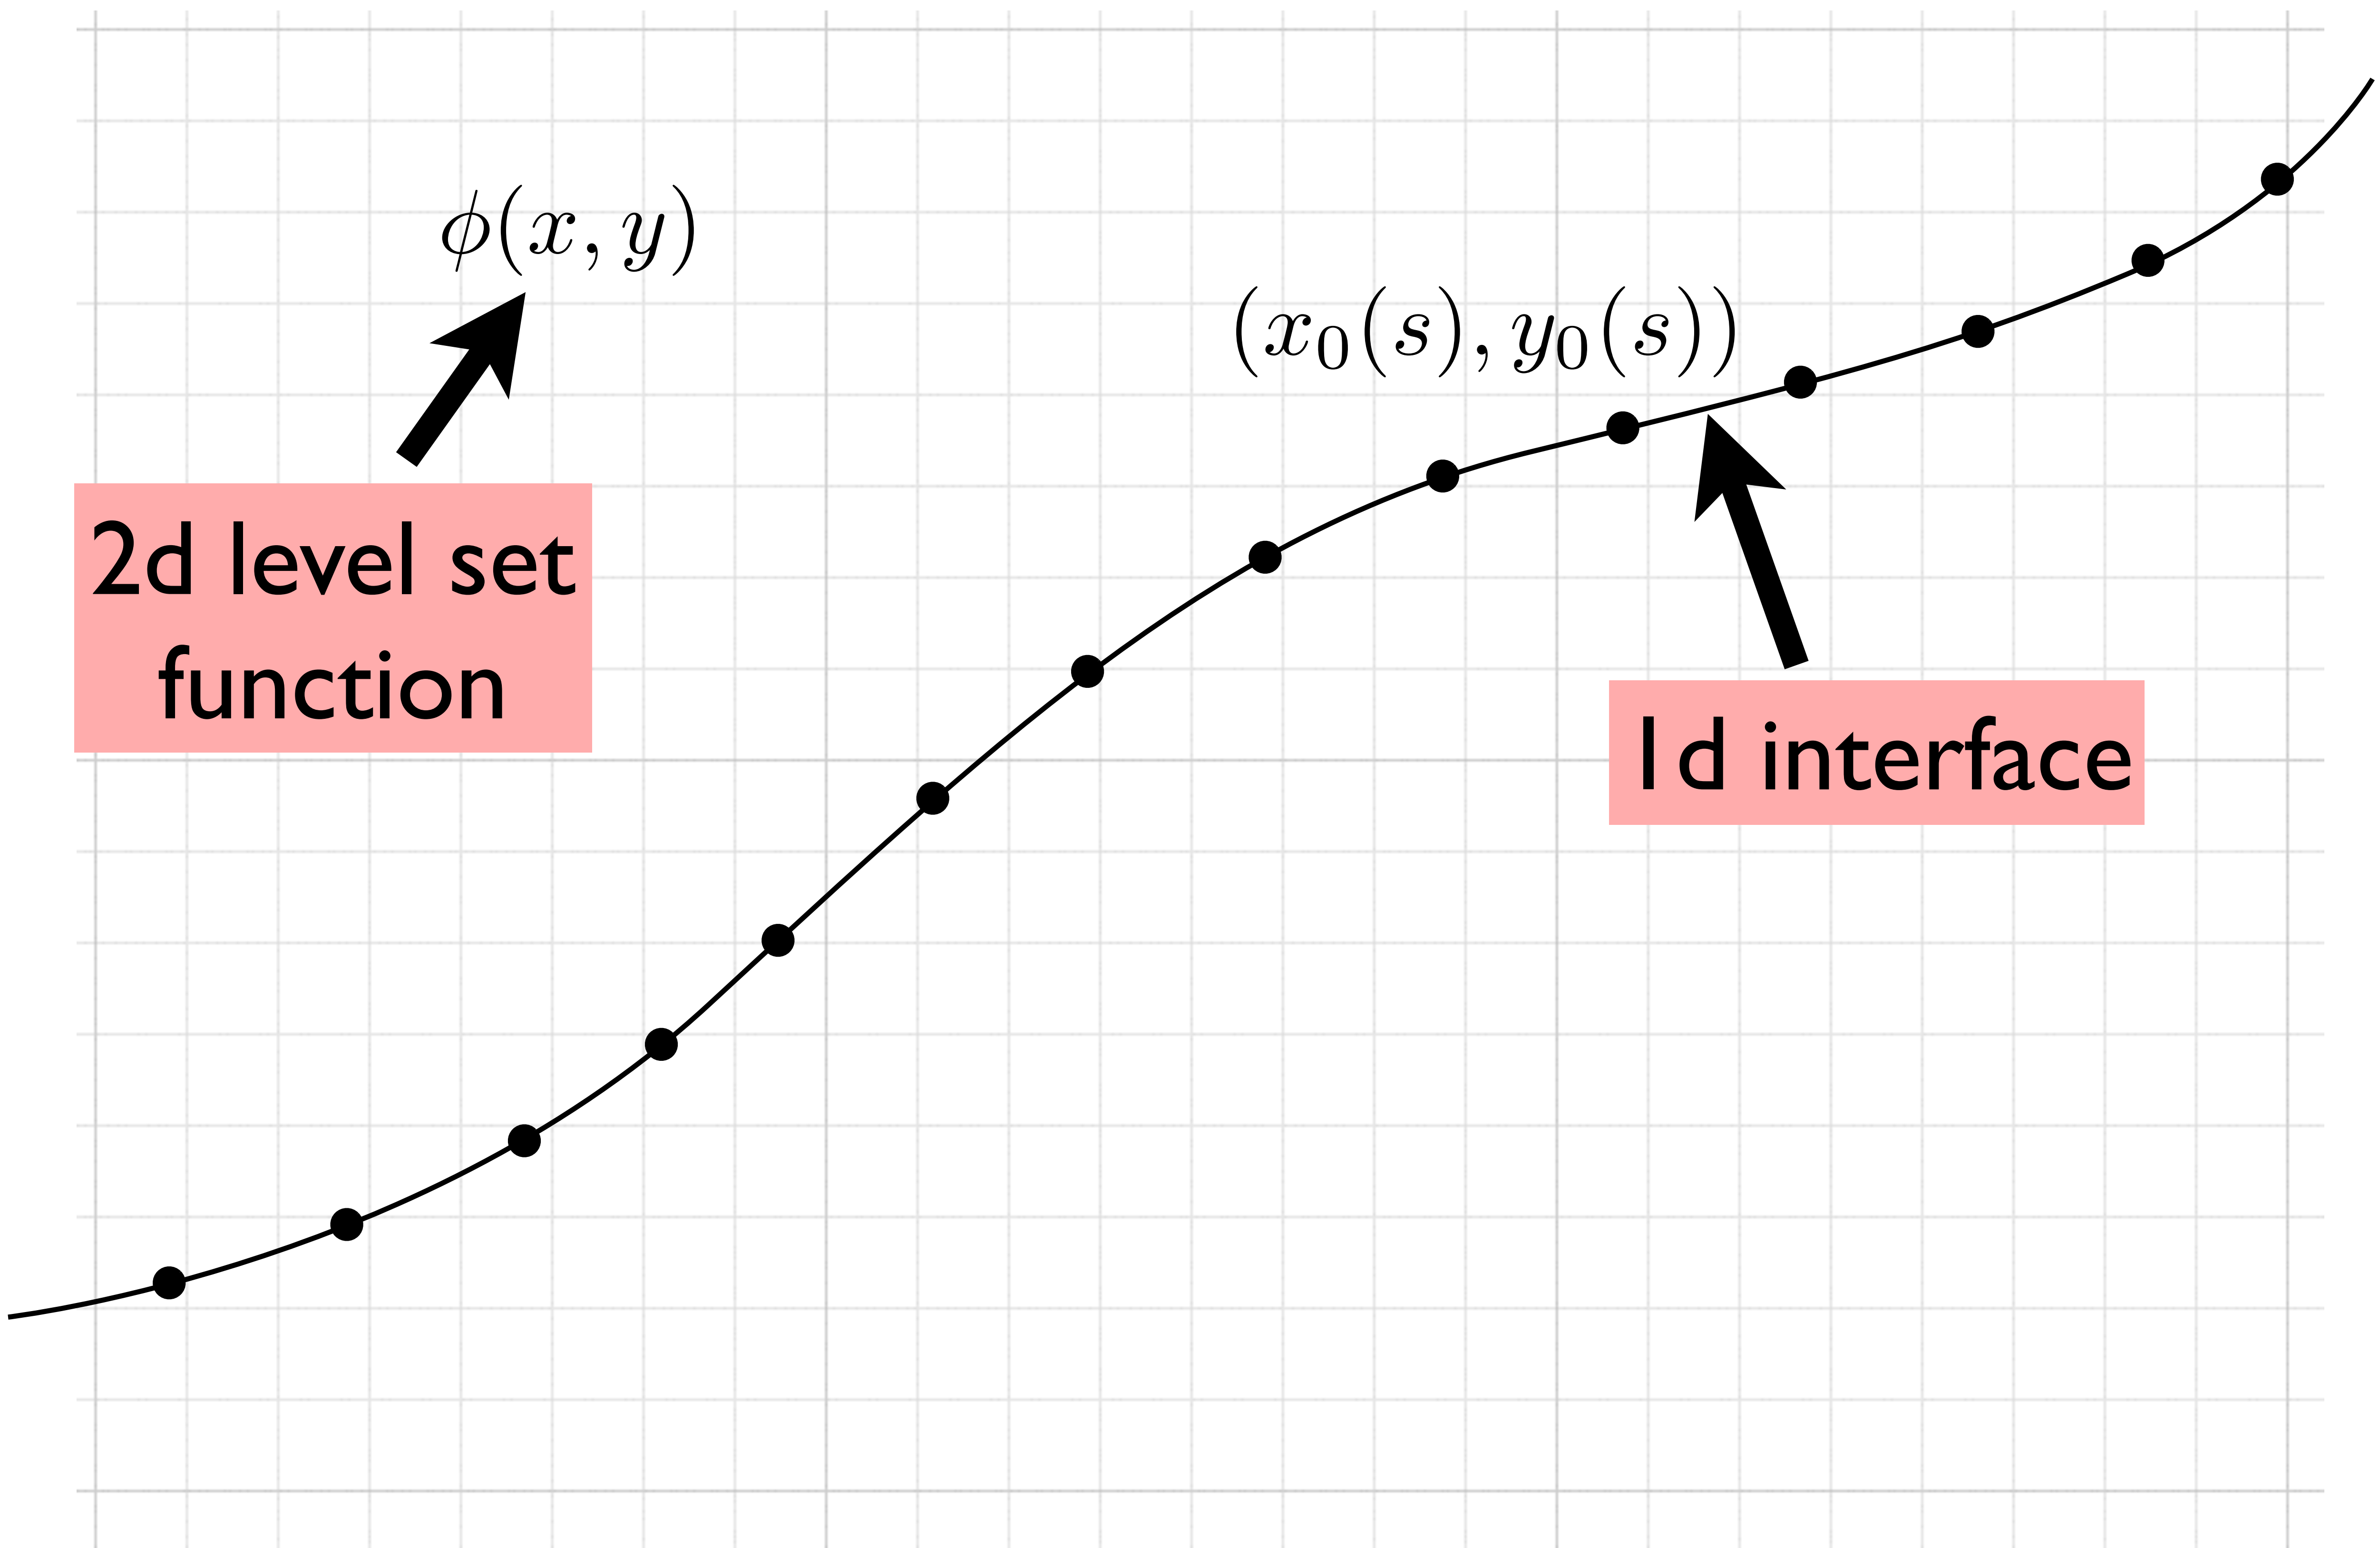


our rigid/deformable simulator in Pixar's *WALL-E*

Selle et al. 2007

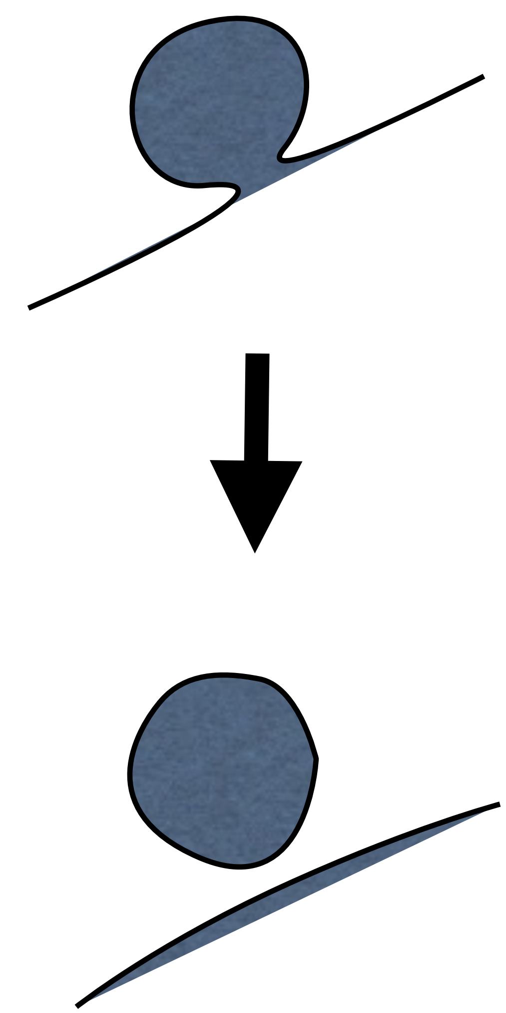
Fluid simulation

In fluid simulation, we often use a grid-based representation



An implicit representation has certain advantages over an explicit representation

- naturally handles topological changes
- very easy to extend from 2D to 3D



Fluid equations of motion: Navier-Stokes equations

$$\vec{F} = m\vec{a}$$

$$\rho(\mathbf{u}_t + \mathbf{u} \cdot \nabla \mathbf{u}) = \mu \triangle \mathbf{u} - \nabla p + \mathbf{f}$$

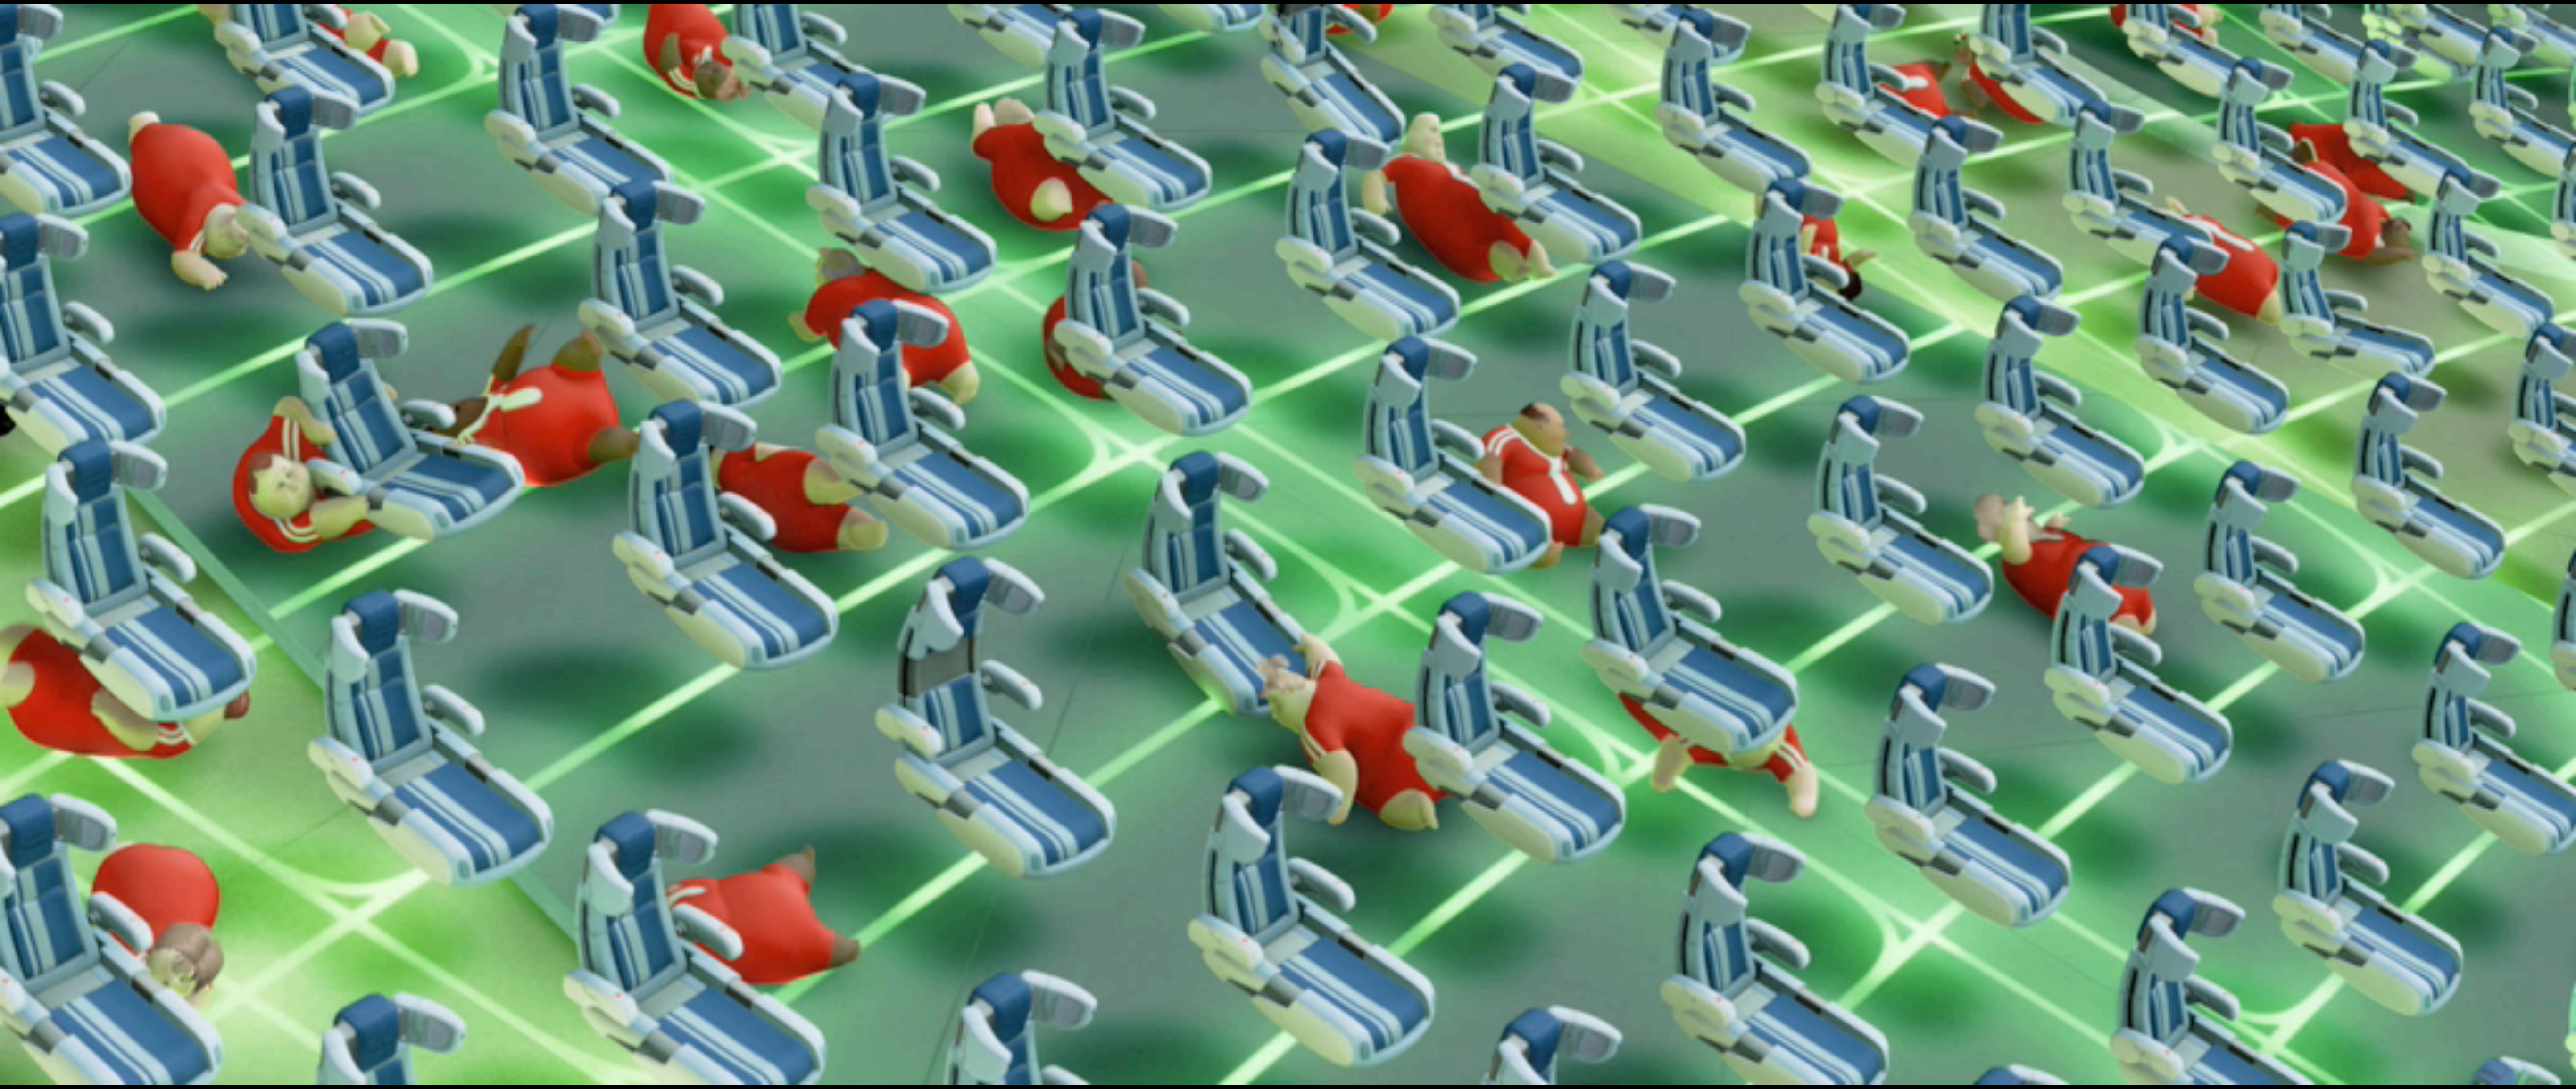
Hong et al. 2007

Two-way Coupled SPH and Particle Level Set Fluid Simulation

Losasso, F., Talton, J., Kwatra, N. and Fedkiw, R. IEEE TVCG 14, No. 4 (2008)

Control of virtual character

[Shinar et al. 2008]



rigid/deformable simulator in Pixar's *WALL-E*
