

Student Profile

'Computer science is an exciting field and its application is in almost all aspects of everyday life; from business to personal use. I've always been inspired by leaders in the computer science field; their capabilities and skills are something I wish to achieve.'

'When I decided I wanted to study computer science, a close friend recommended RMIT because it emphasises practical skills and hands-on experience.'

'RMIT's wide range of study options gave me the flexibility to start a postgraduate program—even though I didn't have a bachelor degree with the same major (I had previously completed a Bachelor in Foreign Languages and a Master in Communication and Media Studies).'

'The City campus location is fantastic. It's a friendly, vibrant environment and close to everything: public transport, shops and restaurants, rock climbing, swimming, bowling and more. You never run out of things to enjoy.'

'Scripting, coding, research skills and report writing are just some of the practical skills I've picked up during my program. Most importantly, I have discovered a drive and determination that I did not know I had, which can take me to where I want to go.'

'I'm now pursuing a PhD in Artificial Intelligence and have the chance to do extensive study in the area of my interest.'

Anh Hoang Dau

PhD (Computer Science)
